UNIWAX 3145

Synthetic polish wax emulsion

Physical Properties

Chemical Nature	: Synthetic Wax Emulsion
Appearance	: Beige-White Medium Viscous Liquid
Solid Content	: 10 ± 1 %
pH	: 8.5 ± 0.5

Application

UNIWAX 3145 is preferably used for high gloss polishing effects on smooth or embossed leathers. It leads to a glossy effect on tip of the grains. When roto-plating at 110-120°C, the gloss of the leather is increased considerably. By adding water based N/C lacquers (10-20%), the wet rubs and the water drop resistance will normally be increased. This improvement occurs approximately in one week after application, depending on the temperature.
